

GridMaster

Generates a gutter of text or pictureboxes in a XPress document

GridMaster XTension gives you an easy way to create grids of text or graphic boxes in your QuarkXPress documents. With Grid Master, you can create a grid of boxes to fit in a specified area. The XTension also lets you create a grid of boxes of a specified size. You determine the amount of space to be left between the boxes, and you choose the number of boxes across and down that will make up the grid. Grid Master does all of the calculations for you and generates a grid of boxes that subdivide your page quickly and easily.
