

HexWeb XT

supports you in converting elements of your XPress document to HTML

HexWeb XT is a powerful tool for the creation of complete online publications directly from within QuarkXPress. When it comes to the distribution of periodical print contents such as newspapers and magazines on the Web, publishers profit from the power, speed and comfort that HexWeb XT as the conversion tool is providing for professional purposes.

HexWeb XT is bundled with HexWeb Index Pro for the automatic creation of table of contents of the converted virtual publications. It creates links automatically and the whole Online-issue is being structured – those who had to link hundreds of HTML-pages manually once before will certainly appreciate these comfortable site management features.

More than 300 publishers worldwide are producing over 6000 HTML-documents daily with HexWeb XT – power that has yet to be found anywhere else. Through the implementation of the Apple developed “Hotsauce” file format (.mcf), 3 D TOC's can be created within seconds. Other possible formats are frames, JavaScript pop-ups and the new Netscape 4.0 layer format.
