

PDF Checkpoint

PDF preflight and conversion solution

PDF Checkpoint is designed to automate and simplify the PDF workflows of graphic designers, ad agencies, prepress houses and printers, and offers the following key features:

- Automate preflighting and conversion of multiple PDF files.
- View all PDF fonts, colors, images and metadata at a glance.
- Route files into success/error folders by preflight results.
- Split files into single page PDFs.
- Export PDF as images with specific resolution, color and page scale.

For example, users can preflight a folder of PDF files and convert successful ones to CMYK TIFF images at resolution 300 dpi while scaling each page by 50%. Or optimize documents for the web and reduce PDF file size dramatically by downsampling images to screen resolution.
