# PDF Design Pro

Generate PDF files with enclosed bookmarks within QuarkXPress

With the PDF Design XTension, control codes are created for Adobe Acrobat within QuarkXPress, along with support for the automatic generation of bookmarks. The Acrobat control codes are inserted into the PostScript files, which are converted into Portable Document Format (PDF) files through the Acrobat Distiller. All PDF actions, such as jump to a bookmark reference, can be performed within QuarkXPress so you can check the behavior of PDF marks at a very early stage of document development.

Features:

- User-defined PDF directives within QuarkXPress
- Project manager
- Automatic generation of user-defined bookmarks (based on typographic attributes)
- Semi-automatic generation of user-defined articles
- User-defined PDF links
