QPS Editions

The publishing system QPS 8 is available in 2 editions:

The "**Standard Edition"** is suited for every company size. This edition starts with 15 concurrent connections. It can be arbitrarily increased and modified according to any company requierements

The competitively priced **"Starter Edition"** contains all program functions of the standrard edition, but this edition is limited concerning configuration features like concurrent connections, database connection etc. (e.g. table below)

Therefore the starter edition is the right decision for small and middle sized companies with a few publishing related employes, wich are looking for a competitively priced start into a professional publishing workflow.

An upgrade from the starter edition to the standard edition is possible everytime. In this case the price difference between both editions will be calculated.

	QPS Starter Edition	QPS Standard Edition
Concurrent connections	10 (max.)	15 - unlimited
QuarkXPress Server (restricted)*	Update to fullversion is not possible	Update to fullversion is possible
Datenbase connection	only HSQL	HSQL, MS-SQL, Oracle
QuarkCopyDesk contained	no	yes (1 license)
Web Editor	yes	yes
Compulsory maintenance	1 year	1 year

*Remark:

QuarkXPress Server will be delivered with 4 sub-renderers but with the following restrictions:

- no rendering of HIRes PDF possible
- no use of "third party" XTensions possible therefore QPS functions of the XPress server restricted
