

# Automation

**Quark Publishing Platform lays a foundation for more efficient customer communications through an automated publishing system.**

When processes are automated, content becomes more consistent with fewer errors and can quickly be assembled for faster output. Implementing an automated system can be as simple as routing a project for review and approval or as complex as pushing personalised communications to mobile devices or tablets.

**Learn about Automation from the perspective of:**

## **Businesses / Enterprises**

Organisations and professional publishers can automatically reach millions of digitally-connected consumers without incurring millions in cost to do so.

- Allows for custom implementation of automatic processes
- Keeps projects on track to meet deadlines
- Saves up to 80% over the cost of a manual approach

## **Content Creators**

Authoring structured content for automation requires modest changes to the content creator's process, but enables deeper knowledge capture and increases the value of the content.

- Saves content creators from manually formatting content
- Streamlines review and approval to ensure timely delivery to market
- Allows for dynamic preview of information in context

## **Designers**

Layout automation enables designers to quickly create and publish richly-designed, interactive content for the Web and digital devices such as smartphones, the iPad, and the Kindle.

- Maintains consistency between layouts
  - Streamlines production with synchronised text and images
  - Leaves more time for creativity
-
