

RulesXT

automatic ad ruling for ALS 2.0

This XTension works in conjunction with ALS 2.0 to finalize the ad stacks on the QuarkXPress page by automating the addition of ruling around the ads. It quickly runs through a range of pages, creates rules between ads and between ads and editorial. Provides rule sizes and thickness, enables rule positioning, alignment, corner abutment specs and includes options for placing guidelines for layout purposes. Ad-space adjustment definition to fit rules is possible.
