SCALEmatic

For scaling activated objects as lines, text boxes or picture frames and their contents

With the XTension SCALEmatic for QuarkXPress you can scale activated objects - as lines, text boxes and pictures frames - and their contents. Various options are available for these objects to configure which object attributes have to be included in scaling and how the objects shall be scaled.

The desired values and scaling attributes are defined in the scaling dialogue of SCALEmatic and the settings are applied. This operating mode is advantageous to provide a new exact scaling size. The scaling always begins in the upper left corner of activated objects.

In the toolbar of QuarkXPress is an additional tool - the scaling tool from SCALEmatic. It allows to scale activated objects intuitionally by dragging the mouse.
