

ScriptMaster XT

records your actions in QuarkXPress as a script

Many of the repetitive actions that you do everyday in QuarkXPress can be “scripted” so that a complex series of element, page or document manipulations can be reduced to a single command. ScriptMaster watches what you do, each menu and dialog you access, everything you click and type. As you work, ScriptMaster XT generates the events that a script editor needs, so that your actions are recorded using the proper syntax from the QuarkXPress scripting dictionary. ScriptMaster starts you out with the correct syntax so that editing your scripts to handle other tasks is a snap. Create powerful scripts which you can run again and again, each doing their job quickly and accurately and helping you get from design to production to final output faster.
