

Sonar Bookends

indexing system

Sonar Bookends is the most popular indexing system. Sonar Bookends is a very powerful and cost-effective solution for creating an index - although not the sophisticated package of the professional version. Sonar Bookends can make an index based on a user-supplied list of items, words based on frequency, and of proper nouns detected using capitalization and punctuation rules. All popular desktop-publishing-file formats, except Adobe® InDesign® (see [Sonar Bookends InDex](#)) are supported.
