

# Sonar TOC

Indexes can be created based on XPress style sheets

Sonar TOC is an add-on to augment [Sonar Bookends'](#) and [Sonar Bookends Professional's](#) capabilities for QuarkXPress® users. Among other things, it allows a table of contents to be generated using style sheets to mark the titles, index entries to be marked either manually or using style sheets, hidden text to be inserted and indexed, and it restricts which blocks of text on a page are to be indexed.

For a Product Comparison for Automatic Indexing see [here...](#)
