

## Features

Universal Type Server is the only true client/server font management solution to deliver secure and dynamic directory services integration, ease of administration, increased scalability and control of font licensing compliance.

### Directory Services Integration

- **NEW** An industry first and optional module to allow administrators to fully integrate with Microsoft's Active Directory and Apple's Open Directory
- **NEW** "single sign-on" functionality with added support for Kerberos secure network authentication
- Find more information [here...](#)

### External Database Module

- **NEW** Optional module to harness the power of an independent Microsoft SQL Server
- Powerful and scalable like no other font server
- Find more information [here...](#)

### Centralized & Collaborative System

- Central font management location for corporate font libraries
- Collaborative system ideal for workgroups sharing fonts
- Live font management system where changes happen in real time to speed up workflow
- Fonts and font metadata exist on the server to ensure consistency across the team  
Changes made by authorized users are automatically shared

### True Font License Compliance

- Control which fonts are available and to which users
- Limit users' permissions to add, delete and/or collect fonts for output
- **NEW** Analyze and report on font license compliance for all users
- **NEW** Prevent users from installing unlicensed fonts on their systems
- **NEW** Prevent font conflicts by automatically and permanently activating sets of fonts for users
- Limit who can add fonts to a personal "sandbox" to experiment with fonts before they enter the workflow
- Restrict fonts on user machines by using the "on-demand" mode, where fonts are only downloaded when needed and then removed

### Ensure Font Consistency

- **NEW** Streamline your workflow by automatically activating fonts for users
- **ENHANCED** Create a custom font management environment with granular permissions to meet the requirements of diverse users
- **ENHANCED** Check fonts for corruption and repair before adding them to the font server
- **ENHANCED** Auto-activate fonts in Adobe InDesign® and Illustrator® CS2, CS3 and CS4 and QuarkXPress® 7 and 8 documents for Mac and Window users
- Activate the exact fonts needed, utilizing Font Sense™ font identification mechanism and eliminate font substitutions
- Create a conflict-free environment with a single font data source

### IT Functionality

- **NEW Directory Integration Module** (optional add-on): Full synchronization of users and workgroups with Microsoft's Active Directory and Apple's Open Directory with added

- support for Kerberos secure network authentication.
- **NEW External Database Module** (optional add-on): Increase scalability, heavy-load performance and management options
- **NEW** Simplified, one-time-setup management of users and workgroups
- **NEW** Managed deployment and user consistency
- Simple serialization; one serial number entered at the server level unlocks functionality of the server and number of client connections
- Low network overhead: efficient server distributes only the incremental changes happening in the database.
- **ENHANCED** Updated client and database architecture optimizes server transactions to ensure optimum user experience even under heavy load
- **ENHANCED** Cross-platform backup and restore even between platforms and database engines
- **ENHANCED** Architecture built on a progressive JBoss-based J2EE for high performance and stability
- Fully supports cross-platform (Mac/Win) teams for both server and clients
- Manage the font server and users remotely with a secure web-based interface
- Outstanding flexibility with granular user and group permissions
- Command line tools for server administration

#### End-User Support & Usability

- **NEW** Amazing font and glyph previews
  - **NEW** Floating font previews that “tear-off” and float on top of any document
  - **NEW** Encoding-aware font previews shows all native characters in a particular font face
  - **NEW** Glyph View lets you see all characters supported by a selected font
  - **NEW** Create print sample pages of any previewed font
  - **NEW** Streamlined access with “remember me” functionality
  - **ENHANCED** Precise font auto-activation in Adobe InDesign® and Illustrator® CS2, CS3 and CS4 and QuarkXPress® 7 and 8 documents for Mac and Windows users
  - Work uninterrupted whether online or offline
  - Use Personal Workgroups as a “sandbox” to experiment with fonts before entering the workflow
  - Professional auto activation with Font Sense™ exact font matching technology
  - Smart sets, saved finds that automatically update when new fonts match the specific criteria
-
